1. Potassium-40 is naturally-occurring radioactive materials (NORM).
2. The symbol "—" indicates that the activity of sample is below the Minimum Detectable Amount (MDA). The MDA of Potassium-40 is 10 Bq/Kg. The MDA of Cesium-134, Cesium-137 and Iodine-131 are all less than 1 Bq/Kg. All results of Iodine-131 were below the minimum detectable activity (MDA).
3. According to the "Standards for the Tolerance of Atomic Dust and Radioactivity Contamination in Foods" announced by the Ministry of Health and Welfare, standard limits for cesium (Cs-134 and Cs-137) in foods is 100 Bq/kg except dairy products (50 Bq/kg).
