

Taiwan Power Company

Kuosheng Nuclear Power Station

June, 2022

Monthly operating report of low-level radioactive waste

Monthly operating report of low-level radioactive waste at Kuosheng power station in June, 2022

一、The amount of new generation low-level radioactive waste in this month

Waste types/ Categories	Solidified waste (55 gallon drums)	Non-solidified waste (55 gallon drums)				Total
		Spent Resin	Combustible	Compressible	Others	
Quantities of generation	25	0	10	1	1	37

二、The storage statistics of radioactive waste

Waste types/ categories	Solidified waste (55 gallon drums)	Non-Solidified Waste (55 gallon drums)				Total
		Spent Resin	Combustible	Compressible	Others	
Quantities of Storage	26,874	11,452	1,448	1,767	17,021	58,562
Quantities of treatment	0	0	0	0	0	0
Quantities of generation for secondary treatment	0	0	0	0	0	0

三、Monthly generation statistics of liquid radwaste input

Waste types	Monthly total volume of liquid radwaste input	Average daily volume of liquid radwaste input	Remarks
Unit(gallons)	962,233	32,074	

Remarks:

1. Quantities of storage : The cumulative quantities of radioactive waste are stored at the radioactive waste storage facilities at the power station.
2. Quantities of treatment : The quantities of various types of radioactive waste are treated in this month.
3. Quantities of generation for secondary treatment : The quantities of radioactive waste generated are cumulative radioactive waste treated for the second time.
4. The volume of liquid radwaste input : The volume of liquid radwaste is collected into the radioactive liquid treatment system at the power station.
