

NPP decommissioning Violation Yearly Trend
(Data up to the end of June 2025)

NPP decommissioning Violation

The NSC is responsible for effectively overseeing nuclear power plant decommissioning safety. For any decommissioning activity that is not carried out in accordance with the pertinent regulations, such as failing to adhere to the decommissioning plan or the related procedures when carrying out a specific decommissioning task, human errors, administrative management failures, etc., the NSC will take necessary corrective measures to ensure that the decommissioning work meets its safety requirements and achieves its quality objectives.
